# Advanced IDE Workflows - using @ based mentions

## Changes Made:

### 1. LoginForm Component ( `alx-polly/app/components/auth/login-form.tsx` ):

- ☒ Removed the client-side `handleSubmit` function that was causing the server/client boundary issue
- ☒ Removed the `redirect` import since it's no longer needed in the component
- ☒ Directly passed `signInAction` to the form's `action` prop - this is the cleanest way to use server actions

### 2. signInAction Server Action ( `alx-polly/lib/actions/auth.ts` ):

- ☒ Updated return type from `Promise<AuthActionResult>` to `Promise<void>` since we're now handling redirects directly
- ☒ Added direct redirect calls for all scenarios:
  - Missing email/password → redirect to login with error
  - Authentication error → redirect to login with specific error message
  - Success → redirect to `/polls`
  - Unexpected error → redirect to login with generic error message
